Hi Jessie,

Hope you are having a nice summer! I wanted to follow-up on the possible paper idea from the Cape Fear River plume in remote sensing. I am not entirely sure the direction you had envisioned when you mentioned it, but if you were looking for time-periods that might be interesting to co-investigate the Cape Fear River plume with a combination of shoreline/offshore data and remote sensing, I have two candidate time periods where we have measurements (currents, waves, bottom water properties) offshore of Frying Pan Shoals and the NCDEQ dataset:

1. August/September, 2025: Our student, Arden, sees Brunswick county beaches (south of the Cape Fear) light up with low salinity and high enterococcus. There was a lot of rain at that time last year.
2. May/June, 2024: Arden sees a smaller signal at both New Hanover county and Brunswick county beaches, so perhaps the plume was more offshore.

Attached here are some example nice satellite imagery from Sentinel and VIIRS (daily, so there are many others), perhaps there is a PACE flyover? Or other you were interested in looking at.

Happy to chat about this further at some point.

Cheers,

Ata

Notification

[This email originated from outside of UNCW]

Hi everyone,

So sorry to be the bearer of this news, but we were not selected for the NASA Water Quality funding. I really enjoyed working with all of you on the proposal, and I think there is room to develop it into a paper with just a few straightforward analyses (no modeling). Let me know if you are interested in turning it into a paper with me and I'll get that going.

Take care,

Jessie

Subject: NASA ROSES 2025 A.7 (WATER QUALITY APPLICATIONS) Informal Notification

Dear NASA ROSES-25 A.7 Proposer,

You are receiving this message because you proposed to the NASA ROSES 2025 solicitation for the A.7: Water Quality Applications element.

We received a total of 93 proposals in response to the solicitation. The total funding available for these awards was anticipated to be \$7.5 million over the duration of the awards. 11 proposals have been identified for further review, with an additional 3 proposals to be further reviewed based on available funds.

Unfortunately, I regret to inform you that your proposal was not considered for further review.

This e-mail is a preliminary, informal notification. Within a few weeks, you will receive an e-mail notification that a formal letter, as well as proposal-specific feedback, is available for download via NSPIRES. If after looking at the evaluation you feel you would like more information concerning the review, feel free to contact me.

Once again, I am very sorry for the news. This is the worst part of my job - I know how much work went into writing each proposal. I wish you the best of luck with your future submissions to NASA research announcements.

Best regards,

Erin Urquhart
