Dr. Jessie Turner
Old Dominion University
PO Box 6369
Norfolk, VA 23508

Dear Dr. Turner:

We have completed the evaluation of your proposal entitled “Assessing Post-Storm Water Quality Patterns and Predictability for Recreation and Fisheries Management in the Coastal Carolinas” (25-WATERQ25-0074), submitted to the Science Mission Directorate’s Earth Science Division, in response to NASA Research Announcement (NRA) NNH25ZDA001N-WATERQ, Research Opportunities in Space and Earth Science (ROSES-2025), Program Element A.7 Water Quality Applications. NASA received a total of 93 proposals in response to this NRA and selected 11. Peer review panels evaluated all received proposals in terms of their intrinsic merit, relevance and responsiveness to Earth Science goals and objectives, and cost. I regret to inform you that we are not recommending funding for your proposed research activities.

It was challenging to select a balanced and affordable program of water quality applications activities relevant to the solicitation’s objectives, and not all meritorious proposals could be accommodated.

The primary reason your proposal is being declined is its overall quality and relevance in relation to other proposals received.

Attached is a copy of the peer review panel summary. If you have any questions regarding our decision or the details of the evaluation process related to your proposal, please contact Dr. Erin Urquhart at erin.urquhart.jephson@nasa.gov.

NASA considers the Proposal Title, the Principal Investigator's name and organization, and the Proposal Summary of selected proposals to be in the public domain. NASA will be listing this information on the NSPIRES Web site, which is located at <http://nspires.nasaprs.com/>. At this site, under the “Solicitations” heading, click on the link to “CLOSED/PAST” NASA research announcements. Secondly, type the keywords of the solicitation into the box to scan the list for the Program Element. Next, click the link to the corresponding fiscal year's “Solicitation #” to view the solicitation’s announcements page. Finally, click the link to the posting under the title “Selections” to view the posting of the 10 proposals selected.

NASA strives to provide frequent opportunities to scientists wishing to propose research that supports our mission, and we encourage you to submit proposals to such research announcements in the future. Links to those solicitations also can be found at the NSPIRES Web site.

We look forward to your continued scientific involvement with NASA's Earth Science Division and Science Mission Directorate research programs.

Sincerely,

Barry L. Lefer, Ph.D.
Associate Director for Research
Earth Science Division
Science Mission Directorate

Thomas Wagner, Ph.D.
Associate Director for Earth Action
Earth Science Division
Science Mission Directorate
